Rapid antigen tests for Sanitas customers

Sanitas is adapting to the demands of the new situation, making a **huge professional and financial effort and investing in new services and benefits** dedicated to taking care of our customers' health.

Therefore, we make available to our clients **antigen testing** as a service of more diagnosis without the need for a prescription medical, since the speed in the detection of cases is essential to stop the advance of the virus.

From now on, all Sanitas customers have included in your insurance antigen testing as a diagnostic service more and without the need for a medical prescription, to detect agile form the COVID-19.

Antigen test: the most agile test for detecting COVID-19 infection

Early detection of COVID-19 is essential. **The rapid antigen test** is a simple test for detecting, **on the same day**, whether an asymptomatic person who has been in close contact with someone who has tested positive has an active COVID-19 infection.

Therefore, **our customers can protect themselves and those around them**, helping to halt the spread of the pandemic.

In addition to giving testing to our customers, **we offer video consultation or phone appointments with a general practitioner or paediatrician**, who will explain the steps to follow until they have fully recovered.

COVID-19 detection tests

Rapid antigen test

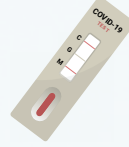

NEW

Test that detects virus proteins in a nasopharyngeal sample

COVERED FOR

- Asymptomatic patients who have been in **close contact** with a person who has tested positive less 7 days ago.
- Patients with compatible symptoms

SUITABLE FOR

apidly detecting the virus in order to treat and isolate the patient as quickly as possible.

Results in a few hours

PCR (Polymerase Chain Reaction)

Test that detects the virus in a nasopharyngeal sample

COVERED FOR

- Prior to surgery, child delivery or invasive diagnostic test.
- Confirmation of the absence of the virus after admission for COVID-19.

Patients with compatible symptoms and with a prescription from the general medicine, paediatrics, geriatric, internal medicine, pulmonology, oncology and emergency specialities.

NEW

SUITABLE FOR

Detecting the presence or absence of the virus at a specific time, even during the incubation period.

Results in a few days

Antibody detection (serology)

This is a blood test that measures the response after contact with the virus.

Valid after at least 10 days.

COVERED FOR

- Emergencies or admissions for patients with compatible symptoms.
- Prior to surgery or invasive diagnostic test.

SUITABLE FOR

Check whether a person's immune system has made antibodies in response to the virus or not and to find out the current stage of the infection.

Antigen test

When can I have an antigen test?

This test is recommended for customers who have been in **close contact** with a person diagnosed with COVID-19 more than 48 or 72 hours ago but less than 7 days ago.

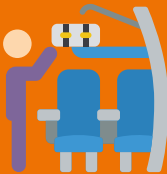

- Each customer can have 2 tests in 30 days between October and December 2020. In policies with copayment, the usual copayment for diagnostic tests will apply to this type of test. When making an online appointment, a message will appear warning of this limitation.
- Customers of products that include clinical testing cover can have the test. **The cost of the rapid antigen tests shall be covered, exceptionally, by Sanitas between October and December 2020.**

What is close contact?

>2m
<15'

Having been in the same place and less than 2 metres away for more than 15 minutes.

2 seats

Having been on a plane, train or other means of long-haul transport in a radius of two seats, and the staff or crew who have been in contact.

Having provided care, healthcare staff or social health staff who have not used appropriate protection measures, relatives or people who have had any similar type of physical contact.

How to make an appointment for an antigen test

The process for getting the results differs depending on whether the test is going to be done at a Sanitas centre or an appointed centre.

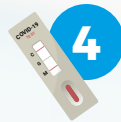

In a Sanitas medical centre

Make an appointment for the test

1 Log on to Mi Sanitas with your **username and password**

4 In reason for consultation, select **Antigen Test**

2 Select the speciality **Clinical Tests**

5 Choose the **el día y la hora** to have the test

3 Search appointment by **date**

IMPORTANT: You do not need a **prescription**

Results available in a few hours

The customer can check them in the **My Reports** section of the Mi Sanitas private area on the app or website after registering.

Remember that **a password is required to access this section.**

In regions without Sanitas centres

Click on the link to see the list of appointed centres that carry out the antigen tests.

The medical centre will provide information on collecting the results.

Sample results report for Sanitas centres

Hospital Universitario La Moraleja
Avda. Francisco Pi y Margall, 81
28050 Madrid

PARTE DE Bupa

DIAGNÓSTICO POR ANTÍGENO SARS COV-2

Nombre del paciente: YCVMYOYV CYIBBIBT, KAFOH
Teléfono:
Fecha de visita: 29/09/2020

Muestra:
Nasofaríngea (Hisopo)

Resultado:
Positive or Negative

Text depending on diagnosis

POSITIVE result for the Antigen SARS-CoV-2 diagnostic test:

the result confirms the presence of SARS-Cov-2. You must make a video consultation or phone appointment with a general practitioner or paediatrician who will explain the steps to follow and monitor the process.

Check with the centre.

NEGATIVE result for the Antigen SARS-CoV-2 diagnostic test:

it is still important to monitor your health, take precautionary measures with the people around you and if within a few days you develop compatible symptoms (fever, cough, loss of smell, muscle aches) or the close contact with a person who has tested positive was less than 7 days ago, make a video consultation or phone appointment with a general practitioner or paediatrician, who will explain the steps to follow.
